

## JM assignment - II

DATE : .....

Name - Syeda Reha Quasar

Roll no. - 14114802719

Section - ~~205~~ 5C7

Ques. How do work study and measurement will be used by industrial engineers? What is the relevance of time study in industry?

*Ans.* Work measurement study is a general term used to describe the systematic application of industrial engineering techniques to establish the work content and time it should take to complete a task or series of tasks.

Work measurement is a productivity improvement tool. Before improvements can be made, the current productivity level of an organisation must be measured. This measurement is then used as a baseline to determine if improvement project have resulted in genuine improvement.

Work measurement helps to uncover non-value added areas of waste inconsistency and non-standardization that exist in the workplace environment. Work measurement studies uncover ways to make work easier, and to produce products or services more quickly and economically.

Work is measured for following reasons:

1. To discover and eliminate lost or ineffective time.
2. To establish standard times of performance measurements.
3. To measure performance against realistic expectations.
4. To set operating goals and objectives.

Time study is a semi-structured process of directly observing and measuring human work using a

Timing device to establish the time required for completion of the work by a qualified worker when working at a defined level of performance.

The main objective of time study is to determine by direct observation, the quantum of human work in a specified task and hence establish the standard time within which an average worker working at a normal pace should complete the task using a specified method.

Ques 2. What is 'Total Quality Management'? Mention its principles. How it can bring overall growth in the company.

Ans Total Quality Management (TQM) is the continual process of detecting and reducing or eliminating errors in manufacturing, streamlining supply chain management, improving the customer experience, and ensuring that employees are up to speed with training. Total quality management aims to hold all parties involved in the production process accountable for the overall quality of the final product or service.

Principle: TQM is considered a customer focused approach that focuses on consistently improving business operations. It strives to ensure all associated employees work towards the common goal of improving the product or service quality, as well as improving product or service quality as well as improving the procedures that are in place for production while TQM originated in the manufacturing sector its principles can be applied to a variety of

industries with a focus on long-term change rather than short-term change rather than short-term goals it provides a cohesive vision for systemic change. With this in mind, TQM is used in many industries including but not limited to, manufacturing, banking and finance and medicine. These techniques can be applied to all departments within an individual organization as well. This helps ensure all employees are working towards the goals set forth for the company, improving function in each area. Involved departments can include administration, marketing, production, and employee training.

TQM oversees all activities and tasks needed to maintain a desired overall level of excellence within a business and its operations. This includes the determination of a quality policy, creating and implementing quality planning and assurance, and quality control and quality improvement measures.

Ques 3. Write a short notes on the following:

as Quality control

Quality control is a process through which a business seeks to ensure that products quality is maintained or improved. Quality control requires the company to create an environment in which both management and employees strive for perfection. This is done by training personnel to create benchmark for product quality and testing products to check for statistically

### Significant Variation

A significant aspect of quality control is the establishment of well-defined controls. These controls help standardize both production and reaction to quality issues, leaving room for errors by specifying which production activities are to be completed by which personnel reduces the chances that employees will be involved in tasks for which they do not have adequate training.

### b) Taguchi Philosophy:

The Taguchi method of quality control is an approach to engineering that emphasizes the roles of research and development, and products design and development, in reducing the occurrence of defects and failures in manufactured goods.

This method, developed by Japanese engineer and statistician Genichi Taguchi, considered design to be more important than the manufacturing process in quality control and aims to eliminate variations in products before they can occur.

### c) Benefit of Quality Circle:

Conceptually, quality circles can be described as a small group of employees of the same work area, doing similar work that meets voluntarily and regularly to identify, analyze and resolve work related problems.

This small group with every member of the

will participate to the work area and also help self and mutual development in the process.

1. Through the form of QC the chronic problems of organization, which which really create hurdles in work get resolved by the gurus root employees of Organization, whose knowledge and experience otherwise is not fully utilized.
2. With such a capable work force, any organization can easily undertake more difficult and challenging assignments for its growth and profit.
3. As the employees gain experience they take more challenging projects, in due course they undertake projects on cost reduction ; material handling , quality improvement preventing wastage , improving delivery , schedule , improving customer service , improving inspection and test methods preventing accidents improving design and process etc
4. Cost reduction
5. Increased productivity
6. Improved quality
7. Better communication
8. Better time keeping
9. Increased team work
10. Smooth working
11. Better mutual trust
12. Greater sense of belongingness
13. Increased safety
14. Better human relations

• The Quality circle concept provides an opportunity to circle members to use their vision , creativity and experience in bringing about improvements in the

work they are engaged in by converting the challenging problems into opportunities and it contributes to the development of the employees and in turn benefits the organisation as well. The concept encourages the sense of belongingness in circle members and they feel they have an important role to play in the organisation.

### a) Kanban System

Kanban is an inventory control system used in just-in-time JIT manufacturing. It was developed by Taiichi Ohno, an industrial engineer at Toyota and takes its name from the coloured cards that track production and order new shipments of parts or materials as they run out. Kanban is the Japanese word for sign, so the Kanban system simply means to use visual cues to prompt the action needed to keep a process flowing.

The Kanban system can be thought of as a signal & response system. When an item is running low at an operational station, there will be a visual cue specifying how much to order from the supply. The person using the part makes the order for the quantity indicated by the Kanban & the supplier provides the exact amount requested.

### -- Benchmarking --

Benchmarking is a process of measuring the performance of a company's products, services, or processes against those of another business considered to be the best in the industry aka "best in class". The point of benchmarking is to identify internal. The point of benchmarking is to

identify internal opportunities for improvement. By studying companies with superior performance, breaking down what makes such superior performance possible & then comprising those processes to how your business operates, you can implement changes that will yield significant improvements. That might mean tweaking a product's features to more closely match a competitor's offering, or changing the scope of services you offer, or installing a new customer relationship management (CRM) system to enable more personalized communication with customers.

There are two basic kinds of improvement opportunities: continuous & dramatic. Continuous improvement is incremental, involving only small adjustments to reap sizeable advance. Dramatic improvement can only come about through reengineering the whole internal work process.

In addition to helping companies become more efficient & profitable, benchmarking has other benefits, too, such as:

- ① Improving employee understanding of cost structures & internal processes.
- ② Encouraging team-building & cooperation in the interests of becoming more competitive.
- ③ Enhancing familiarity with key performance metrics & opportunities for improvement company-wide.

Q8 what do you think are some of the biggest reasons that employees are resistant to change?

A8 Here are 12 reasons why employees resist change - Yes, even if it's good for them:

① loss of job: This is a major reason of the first of the 12 reasons why employees resist changes in the workplace. In an organizational setting any process, technological advancement, working smarter, cost reduction, efficiency, faster turnaround times. All these mean staff & managers will resist the changes that result in their roles being eliminated or reduced. From their perspective, your change is harmful to their employees position in the organization! The satisfaction that employees have with their job determines a portion of their reactions during times of changes.

② Bad communication strategy: This is another crucial reason why employees resist changes. This point is equally as important as that of changes planning on the list of 12 reasons why employees resist change in the workplace. Why? The communication of change from the outset could make or break changes because it fall under the planning phase of change. The way in which any change process is communicated to employees within the organization is a critical factor in determining their reaction. If you can't communicate what, why, how, when, who & what success will look like or how success is going to be measured, then, expect resistance!

③ Shock & Fear of the unknown: This is yet another crucial reason why employees resist change. Employees' responses to organization change

can range from fear & panic to enthusiastic support. During periods of change, some employees may feel the need to cling to the past because it was a more secure, predictable time. If what they did in the past worked well for them, they may resist changing their behavior out of fear that they will not achieve as much in the future. The less the organization knows about the changes & its impact on them, the more fearful they become.

(4) loss of control: This is a key reason why employees resist change. Familiar routine help employees develop a sense of control over their work environment. Being asked to change the way they operate may make employees feel powerless & confused. People are more likely to understand & implement changes when they feel they have some form of control.

(5) lack of competence: This is another major reason out of the 12 reasons why employees resist change in the workplace. This is a fear that is difficult for employees to admit openly. But sometimes change in organization necessitates changes in skills & some people will feel that they won't be able to make the transition well. Therefore the only way for them to try & survive is to kick against the changes.

(6) Poor timing: This is another viable reason why employees resist change at work. Change must be introduced when there are no other major initiatives going on. Sometime it is not what a leader does, but it is how, when & why she or he does it that creates resistance to change! Unconscious resistance can occur because change are introduced in an insensitive manner or at an awkward time.

(7) Lack of Reward: There is a common business saying that managers get what they reward. Organisational employees will resist change when they do not see anything in it for them in terms of rewards. Without 'WIIFM' or a reward, there is no motivation to support the change over the long run. This often means that organisational reward system must be altered to support the change that management want to implement. The reward does not have to always be major or costly.

(8) Office Politics: Every organization has its own share of in-house politics. So, some employees resist change as a political strategy to "show or prove" that the change decision is wrong. They may also resist showing that the person leading the change is not up to the task. These employees are committed to seeing the change effort fail.

(9) loss of support system: Employees already in their comfort zones working with the managers they get along with, & who are operating within predictable routine know their support system will back them up during challenging times. changing the organizational structure may shake their confidence in their support system. They may worry about working for new supervisors in a new team or on unfamiliar projects because they fear that if they try & fail there will be no one there to support them.

(10) Former change Experience: Our attitudes about change are partly determined by the way we have experienced the change in the past. For instance, if in your organization, you ~~can~~ have handled change badly in the past, employees will have good reason for rebelling. Again in personal lives, how employee families reacted to change during their early years is going to affect the way they view change. Employees who live in the same house, shop at the same stores, visit the same social club, & drive the same routes daily throughout their formative years may have more difficulty dealing with change than people who grew up in several different neighborhoods. In the same way these  who become accustomed to associating with people who have the same values & ethics may find it more difficult to appreciate the diversity of today's workforce.

(12)

Lack of trust & support: out of 12 reasons why employees resist changes in the workplace this is yet another ~~too~~ vital reason. Successful organizational change does not occur in a climate of mistrust. Trust, involves faith in the intentions of behaviours of others. In organizations where there is a high degree of trust of each individual employee is treated with respect & dignity, there is less resistance to change.

(13)

Empathy of peer Pressure: ~~whether~~ whether we are introverted or extroverted, we are still social creatures. Organizational stakeholders will insist change to protect the interests of a group, team friends & colleagues. It is normal for employees to resist change to protect their co-workers. This could be pure because they sympathize with their friends because of the change that has been thrust at them. Managers too will resist change to protect their workgroups or friends. All these behaviors can sabotage the success of any change.
